SUMMARY

I'm Ilija, a Web Developer based in Belgrade, Serbia. I specialize in WordPress and Fullstack development and have a decent amount of system administration experience. My University studies gave me a solid foundation upon which I've developed my skills over the course of my work experience.

SKILLS

WordPress - Utilizing page builders like Elementor, Divi, and WPBakery, creating custom themes tailored to specific needs for the client, creating and modifying custom plug-ins, website security and speed optimization (CWV), setting up staging and production environments

HTML, CSS, JavaScript - Mastery of basic tools, specific HTML tags for particular roles (dialog, template), using preprocessor SASS for legibility and functionality, implementing ES6+ features when using vanilla JavaScript on the websites + jQuerry

React and NodeJS - Main stack for building web applications, utilizing MUI for component library along with Typescript and Express to connect to the database of choice (MySQL, PostgreSQL, MongoDB...)

System Administration - Setting up web servers (Nginx, Apache) on instances, installing necessary packages and dependencies, setting up SSL certificates, and configuring DNS

Other skills - Proficiency with PHP and using Laravel for the backend and Twig for creating WordPress themes, high proficiency with Linux operating system, knowledge of various Content Management Systems (Shopify, WebFlow, Hubspot), configuring webpack for projects, version control with Git (GitHub, BitBucket, GitLab), decent knowledge of Tailwind and Bootstrap

EXPERIENCE

WordPress | Full Stack Developer

Dr.Kaske Marketingberatung

📅 08/2024 - Present 📍 Munich, Germany

- Server Administration (AWS, Siteground, Digital Ocean).
- Regular meetings with clients regarding ongoing projects.
- Introduce and supervise new coworkers with the Sage Theme and Linux OS.
- Worked on a plethora of different technologies - Vue.js, BigCommerce, HubL, Python...

FEATURED PROJECTS

Asista Medikal Lux

Asista Medikal Lux is a WordPress + WooCommerce project that provides customer support for elderly people who require assistance with medications for certain illnesses. One of the main challenges of the project was creating a unique shop page that has filter functionalities tailored to the customer's needs, it was custom-made in a Twig-based theme and the filter criteria are stored inside custom fields for each individual product. Along with the shop page, one of the challenges was integrating Salesforce forms into the page and making them look identical to the forms that were added using the plug-in (CF7).

Tax Relief Professional

Tax Relief Professional is a website offering people in the USA different types of tax reliefs, based on the state they're in. The client already had a plug-in created to handle Tax Professionals listing based on state and cities. My task was incorporating the new design to the plug-ins custom functionality, as well as creating some new functionalities in the plug-in itself that were needed in order for the site to work optimally.

Prostorija Shop

Prostorija is a streetwear brand that wanted to establish a presence on a national scale. The design for the website used a lot of high-definition graphic elements for the sections of the page, which I had to optimize for website speed and make the whole site fully responsive. I also had the role of de facto project manager for this website, having to organize communication between the client, designer, market specialist, and the other developer who was helping me speed up the process.

My Lineage

My Lineage specializes in creating and distributing handmade swords that are inspired by historical pieces. They needed high-conversion landing pages for each of their unique sword designs, each of which having high-resolution images of the product itself. The images were a crucial part of the landing pages, so they had to take primacy when coding the landing page responsivnes, in order for the sword details to draw in new customers.
